Health Screenings by HealthCheck Services

Taking place at the:

Georgia Tech Health Fair  
Student Center Ballroom

Wednesday, May 16, 2012

10:00am until 1:00pm

### **HealthCheck makes it easy to take control of your health!**

Now there is a convenient, reliable, and low cost way to check your health. HealthCheck offers an “on-site” health screening program that brings professional medical staff and services to you. At the time of the screening, we will obtain a small blood sample from you. The sample is sent to Quest Diagnostics, a nationally recognized and licensed clinical laboratory, for a comprehensive series of tests. ***These accurate tests detect such health problems as heart disease, diabetes, anemia, nutritional abnormalities, infections, high cholesterol, and even some forms of cancer.*** In addition, we check the function of vital organs such as the heart, liver, kidneys, and thyroid. Also, if you require tests not listed, let us know prior to your screening date so we can accommodate your needs.

### **HealthCheck includes a physician review of your test results.**

Our medical director, a licensed Georgia M.D., will review your tests results and alert you of any abnormalities or potential health risks. Each test will be explained in easy-to-understand terms and will include educational materials that will help you understand your HealthCheck results. ***Your results are strictly confidential and are sent directly to you.***

### **Prevention is the key to wellness.**

Medical experts agree that prevention is the key to good health and well-being. ***By participating in the HealthCheck screening, you will gain valuable insight about your well condition, enabling you to make well-informed decisions about lifestyle choices and medical treatment.*** It is important to establish a baseline and monitor your health on a regular basis. Comparing your results from year to year can alert you to potential health problems. HealthCheck screenings detect small signals before they become potentially serious problems. Early detection saves lives.

### **Don't forget to fast.**

Skip breakfast! **Please refrain from eating for at least 6 hours prior to your screening.** Please drink plenty of water or you may also have black coffee or diet soda.

**No appointment necessary!**
